

NexusCloud Systems: Official Password Reset & Account Recovery Guide

Document Ref: SEC-2024-09

Classification: Public Support Document

1. Overview

This guide provides authorized steps for users to regain access to their NexusCloud Dashboard if credentials have been forgotten or the account has been locked due to multiple failed login attempts.

2. Standard Reset Procedure

If you still have access to your registered email address, follow these steps:

Navigate to the login portal at <https://app.nexuscloud.io/login>.

Select the "Forgot Password?" hyperlink below the login button.

Enter your primary email address associated with the account.

Click "Send Recovery Link."

Within 5 minutes, you will receive an email from security@nexuscloud.io.

Click the secure token link within the email. (Note: The link expires in 30 minutes for security reasons).

Create a new password following the complexity requirements in Section 3.

3. Password Complexity Requirements

To protect our users and remain GDPR compliant, new passwords must meet these criteria:

Minimum length of 12 characters.

Must include at least one uppercase letter (A-Z).

Must include at least one numerical digit (0-9).

Must include at least one special character (e.g., !, @, #, \$, %).

Cannot be a password used in the last 12 months.

4. Multi-Factor Authentication (MFA) Complications

If you have Multi-Factor Authentication enabled via Google Authenticator or Duo: After resetting your password, the system will prompt for your 6-digit TOTP code.

If you have lost your recovery phone, you must provide your "Master Recovery Key" which was generated during the initial account setup.

Failure to provide either code or key will require an identity verification call with a Human Support Representative.

5. Troubleshooting common issues

Token Not Received: Check your "Spam" or "Promotions" folders. Some corporate firewalls (Outlook/Microsoft 365) may delay recovery emails by up to 10 minutes.

Account Locked: If you enter the wrong password 5 times, your IP address is blacklisted for 60 minutes. Clearing cookies (see our Browser Guide) will not bypass a server-side IP lock.

Internal Server Error: If you see an error code during reset, try switching to a Chrome Incognito window to avoid conflicting cached cookies.
